April, 2004

Installation & mold start-up technical services, 24/7

Wentworth Mold Inc. & Electra Form Industries Inc. (divisions of the Wentworth Technologies Packaging Mold Group) introduce technical service support for the installation and mold start-up of PET preform injection tools and PET blow molds. The companies provide dedicated service technicians with over 30+ years experience (unique in the industry) for all common preform injection molding systems and PET blow mold machinery. The Wentworth/EFI technicians are available 24/7 to travel to customer facilities.

Mold Installation & Start-Up services include:

- On-site toolmakers & mold technicians assist in the installation and commissioning of new tooling and turn-key systems.
- Processing technicians are able to analyze and provide solutions for any processing or tooling issues that may occur during start-up and/or production.
- Local coverage in major markets such as N.America, L.America and Europe. Plans to extend this local support in Asia by end 2004.
- Support on processing PET preforms and PET bottles on common machine platforms such as Husky, Netstal, Cincinnati, Kronos, SIG & Sidel.

A recent example for PET blow molds was in L.America. The launch of a high profile PET bottle required optimal mold quality, perfect bottles within tolerance and a fast, cost effective start-up. Wentworth Mold Inc. sent one toolmaker and one process technician. In less than 48 hours each mold and bottle was qualified and approved by the end customer – compared to previous experiences with OEM's this start-up would have normally taken one week per mold/bottle qualification.

The Packaging Mold Group, consists of Wentworth Mold Inc., Electra Form Industries Inc. and Jersey Mold Inc., and is a division of Wentworth Technologies Co. Ltd., the # 1 independent manufacturer and global leader in mold-making & related plastics processing to the packaging industry. The Wentworth Packaging Mold Group supplies PET preform injection molds from single cavity FTM® stacks to 144 cavity Micropitch production molds, blow mold tooling for all types of machines for PET, EBM & ISBM applications. Wentworth Technologies is recognized as the Best Value Supplier in its' niche markets.
